Shashank Sambarapu

+91-9000401079 | shashanksambarapu@gmail.com | LinkedIn | GitHub | Hyderabad, India

Professional Summary

Backend Engineer with **4 years** of experience specializing in **Java, Spring Boot, and SQL**. Experience building microservices, developing REST APIs, and working with cloud deployment tools for enterprise clients like PepsiCo and BMI Group. Focused on writing clean, logical backend code to handle large datasets and service-to-service communication.

Experience

Infosys Limited | Hyderabad, India

Functional Role: Backend Java Developer / Senior Systems Engineer

August 2021 – December 2025

- **Engineered and refactored backend logic** for 10+ Java Spring Boot microservices, managing complex data orchestration between **SAP S4** and application databases via XML/JSON transformations.
- **Developed Spring Boot microservices and RESTful APIs** using Spring Data JPA and Feign Clients to process XML/JSON payloads and manage database transfers across MS SQL Server and MySQL.
- Executed daily deployments across Dev, QA, and Pre-production environments using Azure DevOps pipelines, managing Git version control and Kubernetes ConfigMaps for a 50+ member global team.
- Troubleshot application errors using ELK Stack (Kibana) and Rancher logs, removed redundant code via SonarQube, and maintained unit test coverage utilizing JUnit, Mockito, and GitHub Copilot.

Projects

Project 1 (2023 – 2025)

Client: PepsiCo | System Migration & Integration | Backend Java Developer

- **Technologies Used:** Java, Spring Boot, REST APIs, Kubernetes (ConfigMaps), ELK Stack, Rancher, Swagger, Postman, DBeaver, DBVisualizer, Kafka, Tibco, Git, Azure DevOps (ADO), SonarQube, JUnit, Mockito, GitHub Copilot.
- **Key Work:**

- Worked directly on 10+ specific **Spring Boot services** inside a larger company ecosystem of 40+ interconnected microservices.
- Wrote backend logic to manage database transfers and transaction data flowing from SAP S/4HANA (S4) into the application database.
- Wrote the transformation logic to process incoming data arriving in XML and JSON formats, ensuring the data successfully transferred to external systems like Warehouse Management (WMS) and Blue Yonder. Used DBeaver and DBVisualizer to run SQL queries, check data types, and verify database states during testing.
- Configured Kubernetes ConfigMaps across multiple environment clusters (Dev, QA, Pre-prod) to handle service properties.

Project 2 (2021 – 2022)

Client: BMI Group | Bulk Data Ingestion Module | Backend Java Developer

- **Key Work:**

- Handled core backend development, feature modifications, and functional testing using Java and the Spring framework for the production website.
- Developed a custom CSV upload and download feature that allowed users to download data, make bulk edits in Excel, and upload thousands of records back to the website.
- Wrote the multi-threading logic to parse the uploaded CSV data and save the changes to the database, cutting down the processing time from hours to minutes. By using Python scripts to automate repetitive data formatting and file modification tasks for the development team.
- Handled manual deployments to test servers on Azure VMs by transferring JAR and WAR files using FileZilla.

Project 3 (2021)

Client: CHS Group | Application Support & Maintenance | Backend Software Engineer

- **Technologies Used: .**NET C#, Microsoft SQL Server**.**
- **Key Work:**

- Provided production support and maintenance for an existing enterprise web application.
- Handled day-to-day debugging, application fixes, and database checks to resolve active client support tickets.

Technical Skills

- **Languages & Frameworks:** Java, Python, Spring Boot, REST APIs, Spring Data JPA, Feign Clients.
- **Data & Databases:** MS SQL Server, MySQL, ETL Processes, Batch Processing, Multi-threading.
- **Tools & DevOps:** Azure DevOps, Git, ConfigMaps, SonarQube, ELK Stack, Rancher, Postman, DBeaver.
- **Observability & Exposure:** Grafana, Prometheus, Kubernetes, Kafka, Tibco, JUnit/Mockito.

Education

B.Tech, Electrical and Electronics Engineering | *Aug 2017 – Jun 2021*

CMR College of Engineering & Technology, Hyderabad, India

Certifications

- Microsoft Azure Fundamentals (AZ-900)
- Infosys Certified Java Programmer | Python Associate | Database and SQL Professional
- Google IT Automation with Python Specialization (6-Course Series)
- Python Image Recognition: Hands-On AI Course – BitDegree
